

### FAST RECOVERY BY ROLLING BACK TIME

Data Instant Replay creates point in time copies, called Replays, to provide extremely fast recovery from a wide range of data hazards including viruses, power outages, hardware failure or human error.

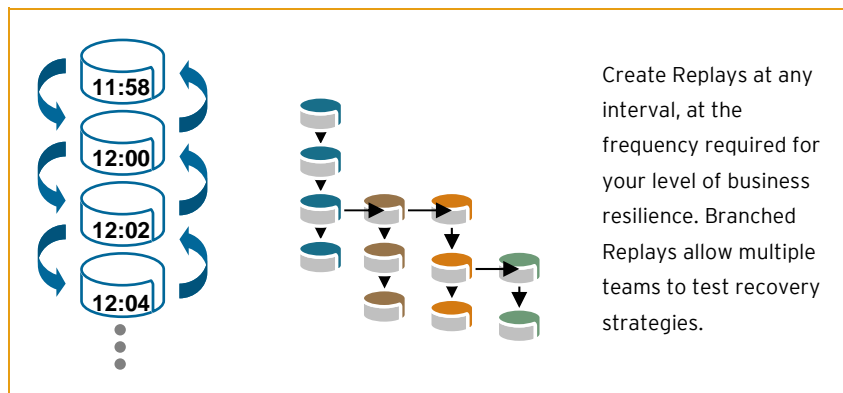

### EASY TO IMPLEMENT POLICY BASED SCHEDULES

Intuitive templates create automated Replay schedules. Set Replay schedules that meet your requirements, without restraints from your storage system. Build policies in a logical and intuitive manner, bringing business resilience within easy reach.

### UNLIMITED REPLAYS USING MINIMAL SPACE

Compellent's efficient architecture allows creation of unlimited Replays that consume minimal storage space. Establish the Replay interval that meets your needs. Use Replays to test new applications or new versions of operating systems on actual data without risk.

### Capabilities

- Roll-back time to a known state instantaneously
- Unlimited number of Replays - at any time interval
- Volume recovery to any host
- Multiple simultaneous read-write Replays
- Automated coalescing algorithms for managing expired Replays

### Benefits

- Recover quickly from data hazards
- Minimize system downtime
- Conserve valuable storage resources
- Reduce dependence on tape based backup
- Create boot volumes for large server farms consuming minimal disk space
- Test new software on actual data without risk

### THE COMPELLENT ADVANTAGE

- Create Replays using only actual written data, optimizing performance
- Unprecedented scaling with unlimited number of Replays; number of volumes; size of volume; number of branches; and life span of Replays
- Intuitive user interface similar to popular appointment and calendar tools
- Affordable combination of features creates extremely fast recovery from common sources of system downtime

#### Standard features

- Automated Replay creation using efficient copy-on-write technology
- Writeable Replays
- Full recovery without volume clones
- Uses only the actual data written for Replays, not the entire volume
- Volume-by-volume policies
- Automatic management of expired replays

#### Scalability

- Unlimited Replays per LUN
- Unlimited number of protected volumes
- Unlimited volume size
- Unlimited branching using writeable Replays
- Map any server to any Replay
- Keep Replays for unlimited time periods without performance degradation

#### Management

- Wizard-based setup and recovery
- Phone-home status notification
- Import/export Replay templates
- Automatically manage expired Replays
- Integration with Microsoft's VSS (Volume Shadow copy Services)
- Remote and local web based monitoring

### About Compellent

Compellent delivers modular storage area networks (SANs) – exclusively through business partners – that every company can afford and any administrator can use.
